## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, drawn to an optical element capable of transmitting light including numerous surfaces, classified in class 359, subclass 719.
- II. Claims 14-21, drawn to metallic die for molding an optical element, classified in class 264, subclass 1.1. Some of these claims are directed to an optical element, but they all have to be produced by the metallic die of claim 14 and therefore could be searched together with the metallic dies claims without placing an undue burden on the examiner.
- III. Claims 22-58, drawn to cutting tool to cut a metallic die, classified in class 76, subclass 116. Some of these claims are directed to a mold or an optical element, but they all have to be produced by the cutting tool of the independent claims and therefore could be searched together with the cutting tool claims without placing an undue burden on the examiner.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case the product can be made by another and materially different apparatus. Specifically regarding Group I, the optical element

Art Unit: 2873

can be made without the use of a metallic die of claims 14-21, specifically wherein the metallic die surface is formed by a rotating cutting process with a cutting tool.

Inventions III and II are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case the product can be made by another and materially different apparatus. Specifically regarding Group II, the metallic die to mold the optical element can be made without the use of a cutting tool of claims 22-58, specifically wherein the cutting tool has a rake face and three edges.

Inventions III and I are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case the optical element can be made without the use of a cutting tool of claims 22-58, specifically wherein the cutting tool has a rake face and three edges.

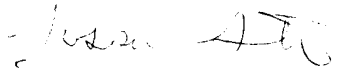

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

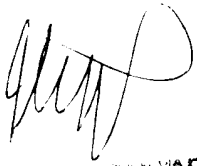

Because these inventions are distinct for the reasons given above and the search required for any one group is not required for any other group, restriction for examination purposes as indicated is proper.
